

Solutions for Manufacturing

Manufacturing units around the world are using technology to cut costs and improve response times through the delivery supply chain. The need for becoming more efficient and nimble has never been higher than it is now in a globally networked economy.

Nixel provides products that snap into one another to provide a complete solution for your manufacturing value chain. From order management to design and materials, Nixel Solutions can help you automate your processes, manage information better, enable better coordination and collaboration among the departments and teams and integrate all this into a single unified environment that management can tap into to monitor, manage and continuously identify areas for improvement and optimization.

Nixel Solutions for Manufacturing include the following products

- Nixel OrderManager
- Nixel DrawingManager
- Nixel PartsManager
- Nixel Inventory
- Nixel Purchase

These are available in Network & Web enabled versions for small & large manufacturing organizations.

Order Management

- Register all orders and details into a single centrally accessible system that every department in the supply chain can log into.
- Set up and update schedules and milestone completions.
- Use the collaborative notes feature to enable coordination and communication between departments and teams.
- Monitor order progress and identify bottlenecks.
- Maintain order history and review for operational improvements.

Engineering Document Management

- Integrate document repository across the organization.
- Enable easy and quick access to documents anywhere in the organization.
- Classify documents and provide selective access as needed.
- Automate workflow routing during the document creation and revision processes.
- Reduce design times through better data access, automated routing and reduction in duplication of parts and documents.

Parts Management

- Manage parts through a single central database that is linked to your engineering document management system.
- Manage bills of materials better and reduce parts proliferation.
- Enable easier access to parts specifications, materials and processes.

Inventory

- Document and manage your inventory better.
- Enable better control of quality of your inventory and encourage better usage of available stocks.
- Record all movements of stocks and monitor life and levels of inventory.

Purchase

- Maintain a single master list of suppliers and their products and services.
- Enable the purchase cycle through inquiries, quotes and purchase orders.
- Track purchases, deliveries and payments.
